IFATSEA welcomes adoption of Air Transport Law in Montenegro recognizing ATSEP licensing

The International Federation of Air Traffic Safety Electronics Associations (IFATSEA) warmly welcomes the adoption of the new Air Transport Law by the Parliament of Montenegro, which formally establishes the licensing of Air Traffic Safety Electronics Personnel (ATSEP) at the national level.

This important legislative milestone represents a significant advancement in strengthening aviation safety, aligning with international standards, and formally recognizing the critical role of ATSEP professionals within the air navigation system. The introduction of a state-level licensing framework enhances professional accountability, standardization, and the overall quality of technical services supporting air traffic management.

IFATSEA extends its sincere congratulations to ATSEPMONT, the national association of ATSEP professionals in Montenegro, which has worked diligently on this initiative over many years in close cooperation with IFATSEA. Their sustained commitment, expertise, and constructive engagement have been instrumental in achieving the formal recognition and regulation of the ATSEP profession within the national legal framework.

This achievement stands as a model of best practice and serves as an encouraging example for other States to recognize and appropriately regulate the ATSEP profession in line with global aviation safety objectives.

IFATSEA remains committed to supporting its Member Associations and working collaboratively with stakeholders worldwide to advance safety, professionalism, and excellence in air traffic safety electronics services.

Ing Frank Kofi Apegyei
IFATSEA President

Meaghan Olmstead
